

RED CHAIN GREASE

Pro-Focus Red Chain Grease is a specially formulated non-melting chain grease to lubricate and protect chains and chain wheels long lasting and extends the life of the parts to be lubricated.

By applying **Pro-Focus Red Chain Grease**, O-, X- and W-ring chains and chain wheels are optimally lubricated and protected.

- Superior lubrication and excellent anti-wear properties.
- Non-melting grease with an extreme high pour point.
- Excellent adhesion and corrosion protection.
- Very good water resistance and resistant to fling off.
- Minimises friction and extends the life of chains and chain wheels.

User instructions:

Clean the chain and chain wheels by removing all dirt, sand, dust and old lubricant and let the chain evaporate for 10 minutes if necessary to allow the volatile parts of the applied cleaner to evaporate.

Apply the grease with a brush on the inner side of the chain, ± 10 cm in front of the rear chain wheel. Turn the rear wheel to spread and divide the grease equally over the chain massaging the grease between the rolls of the chain and the teeth of the chain wheels.

Regular lubrication extends the life of the chain and chain wheels.

Note: Too much grease will fling off and will not provide good protection.
